---

Dear Resident,

The Town of Hartford is conducting a Water line inventory to follow the new EPA Lead and Copper Rule Revision (LCRR). We are asking for your help to execute this federally mandated program requirement in a fast and easy manner with minimal disruption for you.

We are asking that we be allowed entry to your dwelling to take inventory of your water pipes. We will be looking for the location of where your water service line enters your dwelling, size of pipe, material of pipe, and age of pipe. We will also check to see if there is any water treatment system in place. To verify our findings, we will be taking pictures of what your service line looks like coming into your dwelling.

**You can help us by:**

1. Allowing us entry to your dwelling to conduct our inventory.
2. You can make an appointment with our department, so we can conduct our inventory at a later date.
3. If you wish to complete the inspection yourself, please contact our office so we can provide you with a form you can complete and return to us. (Please note that we will still need to do an outside site visit to gather information from the outside.)
4. If you choose not to take part in this program, please contact us and we will provide you with a waiver form to sign.

Being this is a federally mandated requirement, the EPA is asking that we take all measures to collect this information, so your participation in the program is important. The information we gather could also aid us in obtaining federal grants and other funding to replace aging infrastructure, including private services for your dwelling.

We appreciate the time that you have taken to read this and for more information on this program please visit: [Lead and Copper Rule Revisions | Department of Environmental Conservation \(vermont.gov\)](#)

Thank you  
Evan Eccher  
Chief Water Operator
